Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
      printf("*");
    }
    else
    {
     for(int i=1; i<=n; i++)
     {
       for(int j=1; j<=n; j++)
       {
          printf("*");
          printf("*");
          break;
       }
     }
   }
 }
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

void func(int n, int *count) {
    (*count)++;

    if (n == 1) {
        (*count)++;
    } else {

        for (int i = 1; (*count)++, i <= n; i++, (*count)++) {
            for (int j = 1; (*count)++, j <= n;) {
                (*count)++;
                (*count)++;
                break;
            }
        }
    }
}

int main() {
    int n;
    int count = 0;
    if (scanf("%d", &n) == 1) {
        func(n, &count);
        printf("%d", count);
    }
    return 0;
}
```

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
Factor(num) {
{
   for (i = 1; i <= num;++i)
   {
    if (num % i== 0)
       {
         printf("%d ", i);
       }
    }
 }
```

Note: No need of counter increment for declarations and scanf() and counter variable printf() statement.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include <stdio.h>

void Factor(int num, int *count) {
    int i;
    for (i = 1; i <= num; ++i) {
        (*count) += 2;

        if (num % i == 0) {
            (*count)++;
        }
    }
    (*count)++;
}

int main() {
    int num;
    int count = 0;

    if (scanf("%d", &num) == 1) {
        Factor(num, &count);

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
